

WHAT IS NEW IN THE Atlas of Switzerland UPDATE 2.0.5?

The update 2.0.5 corrects a few problems in the "Atlas of Switzerland 2.0" (AdS2).

Update 2.0.5 (Mac OS X only)

- Corrected font representation errors under Mac OS X 10.5
- Fixed minor bugs

Update 2.0.4

- Image export bug of very large images
- Eliminated data errors (Cities)
- Fixed minor bugs

Update 2.0.3

Enhancement in the 2D-map part

- Now can even more maps be combined with each one another (second map)
- Corrected errors with map presentation (Themes: Geomorphology, Hypsography, Hemerobie: Human impact, Major regions, Agglomerations: Population density 1980)
- Adjustment in the Legend (National Languages, Size of Household, Raised bogs)
- Corrections in the Information and Value displays (Stratigraphy, Ores and minerals)
- Eliminated data errors (Hotel Industry: Other accommodation, Europe: Storks 1999)
- Reference maps will always be refreshed, (i.e. correct presentation)
- Analysis Tools always show the correct state of the Buttons
- Mac: Undo functionality with cmd-shift-z
- Mac OS 9: Zoom-in functionality now works with the Zoom-in Button.
- And other smaller bugs.

Enhancements with the 3D-panorama and block diagrams

- Corrected errors with map presentation (Themes: Protected areas, Danger of earthquakes)
- Panorama Position: The ground-clearance is now freely adjustable. The default height above the ground can be set in the Preference file (AdS2_3D_Prefs.xml) to 0 m (current value is 50 m).
- Change between Panorama <-> Block diagrams: Corrected the display of the text field.
- And other smaller bugs.

WHEN SHOULD THE UPDATE BE APPLIED?

This Update can be applied to all past and current installations of AdS2. The 2D-part and the 3D-part can be patched separately. This is the most practical solution when only one of the parts is installed on the hard disk. The Update can not be applied when the "Atlas of Switzerland 2" is only used from the CD-Rom or DVD, and not installed on your computer.

HOW SHOULD THE UPDATE BE APPLIED?

The application AdS2_Update_2.0.x_to_2.0.5 runs on Mac OS X. In the "Update" menu, select "Update 2D Part" in order to update the 2D-part and/or choose "Update 3D Part" in order to update the 3D-part.

You are then asked to select the directory for installation. For the 2D-part, select the folder "AdS2_Map2". For the 3D-part, select the folder "AdS2_Topo3D".

When you have successfully applied the patch, start the "Atlas of Switzerland 2". In the introduction, select a language and then call up the Impressum. The Version Number of your installation should now be 2.0.5.
